

PRODUCT DEVELOPMENT

1 DEFINITION OF IDEA

This is the stage where we get to understand what you want to build

2 HARDWARE REPORT

At this stage, we come up with an hardware report so that you can see what it takes to build your product.

3 ELECTRONICS DESIGN STAGE

We help you design your product from ground up. This stage is "electronics specific". We design your circuit boards and also get them fabricated.

4 FIRMWARE DESIGN STAGE

At this stage, we help you design the appropriate firmware suited for your hardware device.

5 TESTING, TESTING, TESTING.

We run series of test on hardware device. This allows us to assure you of zero failure rate.
